

Intelli Search

Discover the right **content** —
no matter the **format** or
language

Turn images into actionable insights with edge-powered AI. Instantly detect blur, verify objects, and automate visual audits — even without internet. Perfect for inspections, inventory, and compliance across industries.

Key Features

Understand Text, Images and Videos

Enables search using natural language, visuals, or both—no need for exact keywords

Intent Based Matching

Goes beyond keywords to find content based on semantic relevance and intent

Unified Search Across Formats

Seamlessly indexes and retrieves results across different media types in one query

Scalable to Large Archives

Built to handle massive datasets, making it ideal for enterprise and media-scale content

Real-World Proven

Tested and validated on diverse datasets, ensuring practical, high-accuracy performance

Unique Value Proposition

High Performance, Low Cost

Delivers powerful semantic search capabilities on standard local CPUs—no GPUs required

Massively Scalable Architecture

Effortlessly handles millions of documents, making it ideal for enterprise-scale search needs

Versatile Text Compatibility

Designed to work with varied content types like documents, transcriptions, closed captions, etc

Truly Multilingual

Enables semantic understanding and retrieval in 50+ languages, supporting global use cases

Optimized for Real-World Content

Built with robust techniques to handle noisy or unstructured data across formats and sources

Benefits & Outcomes

Enables precise content discovery even from noisy or unstructured sources

Understands both language and visual cues to deliver richer, more relevant results

Enhances search accuracy with semantic context beyond traditional keyword matching

Adapts easily to different data formats, industries, and user preferences

Reduces time spent searching by surfacing the most meaningful content faster
